OLABANJI BABAFEMI OLAIDE

Applied AI | Machine Learning Engineering | Python & PyTorch

Montréal, Québec, Canada | Open to relocation within Canada

github.com/olabanjiolaide | LinkedIn | Portfolio

PROFILE

Machine-learning researcher with an MSc in Computer Science and ongoing MASc studies in Electrical and Computer Engineering. Develop Python-based learning pipelines, investigate data and model failures, and evaluate experimental configurations reproducibly. Interests include multimodal learning, federated learning, and privacy-aware edge systems.

TECHNICAL SKILLS

Programming: Python, Java, Git/GitHub, modular development and debugging.
Machine learning: PyTorch, scikit-learn, multimodal fusion, classification, clustering, optimization and comparative evaluation.
Engineering: FastAPI, SQLite-backed review workflows, automated tests, GitHub Actions, data validation, preprocessing, normalization, error analysis and reproducible experiments.

RELEVANT EXPERIENCE

Research Assistant | NI2Lab, Concordia University | Sep 2022 - Present

• Develop Python/PyTorch research software connecting multimodal data preparation, encoders, fusion, local training, clustering and aggregation.

• Diagnose text, audio and visual alignment, normalization and classifier-collapse issues using validation and prediction-distribution diagnostics.

• Compare learning configurations across five random seeds with validation-selected models and a locked held-out test protocol; document privacy, resource-scheduling and queue-behaviour trade-offs.

Teaching Assistant | Concordia University | 2023 - 2026

• Support technical-report, graduate-seminar and Introduction to Real-Time Systems courses; help students communicate technical reasoning and findings clearly.

Research and Development Intern | University of Ibadan | Jun - Dec 2021

• Supported research and teaching activities in data science and machine learning.

SELECTED PROJECT

Support Ticket AI | Python, scikit-learn, FastAPI, SQLite

• Develop a support-request classification and review prototype with checked model bundles, reproducible reports, saved requests, corrections, status tracking and history.

• Completed a 40-case assisted human-review pilot; use documented ambiguity and wording failures to guide further development. These labels are development evidence, not independent test ground truth.

• Extend the review workflow with exact source-text evidence and optional local-model needs proposals that require explicit human adoption, confirmation and saving. Proposal quality remains unevaluated.

EDUCATION

Master of Applied Science, Electrical and Computer Engineering - Concordia University, ongoing.
MSc, Computer Science - University of Ibadan, 2018 - 2021.
BTech, Computer Engineering - LAUTECH, 2010 - 2015.

LANGUAGES

English: fluent. French: intermediate working proficiency, with continuing Québec government language studies.
